

Military Technology in World War I

Directions: Use the links and analyze the interactive gallery. Answer the questions below in complete sentences.

1. Summarize the key technologies used in the war and their effect.
(Minimum 4 sentences)

2. Rank the new technologies from most important to least, and provide the reasoning for each ranking. (Reasoning 3-4 sentences)

	NAME	REASON
1	Long-range artillery	I ranked this at first place because it was very useful military technology. This weapon helps so much because it was the deadliest weapon of the war. It was very useful because it let soldiers shell their enemies from as far as 10 miles away.
2	Tanks	The reason i ranked this at a 2 is because it was important and very useful. It was very useful because you could have killed many people at once. Also it could pass through barbed wires, go through rough terrain and could also cross wide trenches.
3	airplanes	I ranked this at a 3 because it was important and a useful military technology. It helped to observe the enemy's line and for scouting. The reconnaissance aircraft actually helped the French and Britain win the battle of marne.
4	Machine guns and gas mask	The reason I ranked this at a 4 is because it's important but there's more helpful and useful military technology. It is important though because the gas masks help with the bad air, bad gases thrown by the opposite team. The machine guns are helpful to use for when the enemies are near.
5	submarines	The reason I ranked this 5 is because it was helpful but not as important as other military technology. They were used to sink merchant vessels that were bringing needed supplies to the allies.
6	Zeppelins	I didn't really find this one as important as the others, which is why I gave it a ranking of 6. They were used for long distance bombing. The useful part of the zeppelins is that they can fly much longer distances than airplanes. They also could stay in the air for 100 hours.

3. Reflection: How did these new technologies contribute to how deadly the war became and the time it took for the war to end?

This new technology made the war go by faster because of how dangerous the new technologies were. One deadly technology was the Long-range-artillery. It killed a lot of soldiers and allowed soldiers to shell the enemies as far as 10 miles away.
